Hamilton®

USB Charger/Power Socket

eliminates the need for external chargers...

NEW

- Dual purpose - incorporates a Type A USB Socket and a Standard 13A Unswitched Socket
- Type A USB Socket for charging/powering most mobile devices such as :
 - Mobile Phones
 - iPods
 - iPhones
 - MP3 players
 - Hand Held Game Consoles
 - PDAs
 - Digital Cameras

- LED indicates when charging is in progress and when complete
- Safety Shutter on USB socket - power is OFF until a USB device is connected
 - Fits Standard 35mm deep UK Wall Box
 - BS5733
 - Patents Pending

Power Socket Input: 13A 200-240V AC, 50-60Hz, 100mA
 USB Output: 5V DC, 1A, 3W

keeping you at the forefront of technical innovation!

Hamilton®

USB Charger/Power Socket *eliminates the need for external chargers...*

and reduces duplication - for a greener environment...

The New Hamilton USB Charger/Power Output is a 2-in-1 socket. It can be used as a standard 13Amp Socket as well as for charging products that have a USB connection. It is ideal for charging electronic devices such as mobile phones, iPods, MP3 players, PDAs, GPS, digital cameras or any other device that has a USB connection.

Leading edge technology...

Using one of the most advanced IC control systems in the world, the USB socket provides truly multi-level protection by detecting and protecting against short-circuiting, overloading and overheating. Manufactured from high quality polycarbonate material - all components have CE approval. This product is suitable for indoor use only.

Safety built in...

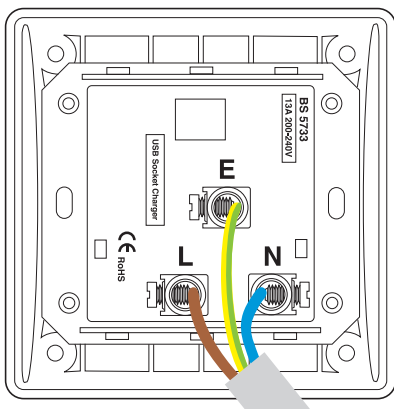

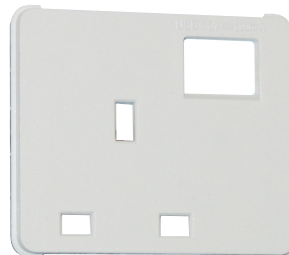

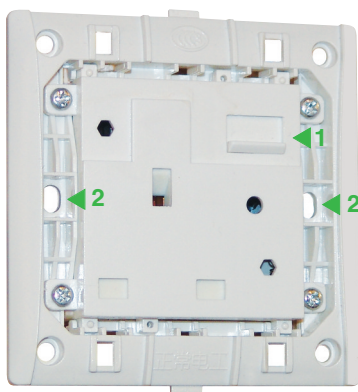

There is a safety shutter on the USB socket. The power to the USB socket is only ON when a USB plug is inserted. Otherwise the power disconnected. When a USB device is plugged in a Green LED will illuminate to indicate that it is connected. The LED will change to Red while charging is in progress and start flashing when charging is almost complete. The LED will change back to Green when the charging process is completed.

Installation could not be simpler...

Just install in a convenient position where there is access to mains power. Measuring 86 x 86 mm it is the same size as a standard wall socket, so the installation process is just same as installing a standard single socket. To charge a USB-powered device, plug the USB cable into the wall socket and then to the device to be charged.

Secret screw fixing with snap-fit front plates...

1. USB Safety Shutter
2. Back Box Fixing Screw Apertures

USB Technical Specifications:

Input: AC 200-240V 50-60Hz 100mA

Output: DC 5V 1A 3W

Operating Temperature: -15°C to 45°C

Relative Humidity: =<95%

Air Pressure: 86KPa 105KPa

Mains Wall Socket Data:

13A AC 200-240V BS5733

Product Order Code: WPUSB13

Please ensure this product is installed by a qualified electrician. This product contains no user serviceable parts, therefore attempting to disassemble further will invalidate the warranty.
